explores the nature of theology and its relationship to other disciplines with a particular focus on life science and that all  
knowledge is intrinsically theological

the idea that morally mentally and physically superior new men might replace the currently existing mankind has periodically seized the imagination of intellectuals leaders and reformers throughout history this volume offers a multidisciplinary investigation into how the new man was made in russia and the early soviet union in the first third of the 20th century the traditional narrative of the soviet new man as a creature forged by propaganda is challenged by the strikingly new and varied case studies presented here the book focuses on the interplay between the rapidly developing experimental life sciences such as biology medicine and psychology and countless cultural products ranging from film and fiction dolls and museum exhibits to pedagogical projects sculptures and exemplary agricultural fairs with contributions from scholars based in the united states canada the uk germany and russia the picture that emerges is emphatically more complex contradictory and suggestive of strong parallels with other new man visions in europe and elsewhere in contrast to previous interpretations that focused largely on the apparent disconnect between utopian new man rhetoric and the harsh realities of everyday life in the soviet union this volume brings to light the surprising historical trajectories of new man visions their often obscure origins acclaimed and forgotten champions unexpected and complicated results and mutual interrelations in short the volume is a timely examination of a recurring theme in modern history when dramatic advancements in science and technology conjoin with anxieties about the future to fuel dreams of a new and improved mankind

revelation through science is written for the educated non scientist who may be troubled by apparent conflicts between science and religion are science and faith incompatible astronomers physicists and biologists have now shown that the more deeply science probes nature the more it reveals evidence pointing us to god after reviewing concepts from those fields revelation through science adds new material from chemistry it describes organic structures that are profoundly vital for life yet too complex for self assembly without some guiding principle it should lift the burden from believers and seekers to realize that science is not the enemy of faith
