as wide ranging imaginative and revealing as the maps they discuss these essays track how maps interpreted broadly convey time as well as space richard white stanford university

maps organize us in space but they also organize us in time looking around the world for the last five hundred years time in maps shows that today's digital maps are only the latest effort to insert a sense of time into the spatial medium of maps historians kären wigen and caroline winterer have assembled leading scholars to consider how maps from all over the world have depicted time in ingenious and provocative ways focusing on maps created in spanish america europe the united states and asia these essays take us from the aztecs documenting the founding of tenochtitlan to early modern japanese reconstructing nostalgic landscapes before western encroachments to nineteenth century americans grappling with the new concept of deep time the book also features a defense of traditional paper maps by digital mapmaker william rankin with more than one hundred color maps and illustrations time in maps will draw the attention of anyone interested in cartographic history

over the last century a growing number of visual artists have been captivated by the entwinements of beauty and power truth and artifice and the fantasy and functionality they perceive in geographical mapmaking this field of map art has moved into increasing prominence in recent years yet critical writing on the topic has been largely confined to general overviews of the field in mapping beyond measure simon ferdinand analyzes diverse map based works of painting collage film walking performance and digital drawing made in britain japan the netherlands ukraine the united states and the former soviet union arguing that together they challenge the dominant modern view of the world as a measurable and malleable geometrical space this challenge has strong political ramifications for it is on the basis of modernity's geometrical worldview that states have legislated over social space that capital has coordinated global markets and exploited distant environments and that powerful cartographic institutions have claimed exclusive authority in mapmaking mapping beyond measure breaks fresh ground in undertaking a series of close readings of significant map artworks in sustained dialogue with spatial theorists including peter sloterdijk zygmunt bauman and michel de certeau in so doing ferdinand reveals how map art calls into question some of the central myths and narratives of rupture through which modern space has traditionally been imagined and establishes map art's distinct value amid broader contemporary shifts toward digital mapping

until recently medieval maps were often looked upon as quaint amusing and quite simply wrong by comparison the best examples of modern cartography appear to offer a much more accurate record of the world however as professor edson makes clear in this stimulating book when seeking the meaning and purpose of maps in the middle ages one cannot assume that they were used for the same purposes or had the same meaning as they do today in fact the differences in structure and content give us an intriguing insight into how medieval mapmakers and readers saw their world by a close study of the context in which the mapmakers produced their work it can be shown that they were often striving to present and make sense of a world picture that naturally incorporated key events from the past at the same time showing a narrative of human spiritual development from the creation to the last judgment from publisher's description
