for a naval shipyard the amount of material ordered after beginning an availability churn and the amount of material ordered but not used excess are key performance indicators pearl harbor naval shipyard s metrics indicate that an average of 50 of material ordered during an availability is ordered after the start of the availability and that 15 of material is excess the navsea goal for both metrics is 5 the authors investigated the causes of high rates of material churn and excess at pearl harbor naval shipyard and what could be done to reduce or alleviate them in determining the solution to the research questions several root causes were identified through field interviews with shipyard personnel and an examination of historical records and various command directives to test the validity of these root causes current practices were evaluated against generally accepted principles of supply chain management and operations management the field interviews and data collection yielded considerable insight into possible causes of churn and excess however due to

time and manpower limitations the study focused on what the authors considered to be the most significant contributors to the problems requisition lead time requisition maintenance forecasting techniques configuration management equipment validation accountability and incentives 1 table 3 figures 13 refs

the study deals with an additional phase of the response characteristics of a rectangular harbor in relation to waves incident on the restricted opening to the open sea an increase in aspect ratio results in a general decrease of the relative harbor length ratio of harbor length to wave length at resonance for the three principal modes of resonance maximum amplification inside the harbor in terms of outside wave height however depends on the mode of resonance as the aspect ratio changes the relative harbor length at resonance exhibits the trends predicted by the closed basin expression for variation in aspect ratio but differs in magnitude and shows certain anomalies not present for the closed basin discontinuities for these variations exist at values of the aspect ratio where closed basin theory predicts two possible modes of resonance author
